

## Geomatic Tool for Data Transformation and Sharing

IDX CloudSync is a geomatic tool developed by Indixio, seamlessly integrates with the GoMap and SIGim suites or can be used independently.

With our solution, your choice of geospatial technology won't be restricted by the data format requested by your partners or external users.

### Save time by automating the transformation and sharing of your geomatic data!

- Import external data into your geomatic solutions
- Automate tasks using our customized scheduling tool
- Support for common geospatial formats and integration of non-standard formats such as Microsoft Excel
- Change data projections and apply filters to shared content
- Convert your geospatial data into various formats

### Why IDX CloudSync?

- Simplifies internal data sharing
- Automates manual conversion tasks
- Streamlines cloud publishing
- Frees you from proprietary formats
- Automates data downloads you don't own

### Effortlessly publish your internal data securely!

- Easily configure backup copies before data sharing
- Web-based download and upload of data
- Transfer files to network locations
- Transfer your internal data to the cloud or shared folders
