

Cartographic application for signage administration in an area

IDX GoMap Road Signs Management (RSM) enables easy and efficient traffic sign display management. It utilizes official sign images from the Ministère du Transport du Québec (MTQ) and keeps them up to date. The application also facilitates the management of custom signs not part of the MTQ library.

Why IDX GoMap RSM?

- Automatic repositioning of signs
- Rapid deployment
- Overlay correction
- Management of complex signs
- User-friendly interface
- Web application

Take advantage of the benefits of automatic repositioning!

The IDX GoMap RSM algorithm automatically repositions all signs within a structure to prevent overlapping. This feature requires no manual intervention, providing a convenient and effortless solution!

Save time!

Your signs are oriented based on current information and automatically arranged within a structure based on their elevation. Additionally, you can place multiple signs on the same structure. Automatic line drawing to the structure makes identification easier.
